New Recreation District to Build Softball Diamond

Perhaps inspired by the distant cries of "play ball" in the training camps of Florida, Arizona and California, the Board of Directors of the Christmas Valley Recreation District voted to build a softball diamond here. You must admit that the Directors, who just were elected on Jan. 11, certainly didn't waste any time getting their first project underway.

The softball diamond will be built on the school site, which is located south and east of the townsite.

News Creates Stir

News of the decision to build a diamond has created quite a stir in town.

Normally peaceful members of the community are seen throwing rocks at various targets. It should be explained these are the would-be pitchers who soon will be trying out for that position.

Ed Cater of the Christmas Valley Lodge already has received numerous queries about the formation of regular leagues. Plans for these will be announced as the softball membership materializes.

Business Men Contribute

As is generally the case, the expensive work of making a first class diamond wouldn't be possible without voluntary contributions from various business men.

Virgil Hall, the local road contractor, has donated the grading work; John Pettus, farming contractor, has consented to brushing the area and seeding the diamond with grass, and Don Clause, president of the Lakeview Building Materials Co., has donated the wire for the backstop.

Many Volunteers

The surveying team of Joe

MORE WATER PIPES INSTALLED IN BUSTLING CHRISTMAS VALLEY — Workmen are shown busily laying more pipe for the continually sprawling water system. This is one of the most important phases of the extension work because these lines will service the townsite. Water will be piped to every single lot in the townsite. Overall water system will eventually cost \$350,000. None of this cost is levied against Property Owners later on.

Lake County Officials Approve Forming of Recreation District

The Christmas Valley Recreation District, which was formed Jan. 11 by the unanimous vote of local residents, was officially approved by high ranking Lake County officials Judge C. W. Ogle and Commissioners James Snyder and J. D. Corum.

The Recreation District, which is governed by a three-man board of Christmas Valley residents, thus becomes the official operating body within this area:

It can set up the budget for the year, institute various planning operations and programs to pro-

vide leadership for the growth and development of Christmas Valley.

The CVRD commission consists of Warren Morton, John Pettus and Charles Selby. The Recreation District is a vehicle to provide for the future development of recreational facilities, youth programs, parks, playgrounds, street maintenance and other community activities in Christmas Valley.

The Recreation District also will consider management procedures of the \$100,000 Christmas Valley Lodge, the 9-hole golf course, the big Christmas Valley Lake and the modern Air Park.

These facilities are to be turned over to the Recreation District for a token consideration by the M. Penn Phillips Co., developers of this rapidly growing community.

This procedure is standard practice for M. Penn Phillips, chairman of the board. This method of governing has been successful at other Phillips developments of Hesperia and Salton City in California.

(Continued on Page 8)

NEARLY \$10,000 TO BE SPENT FOR BUYING GOLF COURSE EQUIPMENT

It'll be a short while yet before golfers start playing the sporty 9-hole Christmas Valley Golf Course but that fact hasn't

stopped action on other fronts.

President Carlo Giuntini announced that nearly \$10,000 worth of golf course equipment will be ordered by June 1.

"We've already ordered \$3,641 worth of equipment on March 1," said Giuntini. "The remainder of machinery, worth \$5,600, will be ordered by June 1."

Already ordered were a tractor with loader and blade, shop equipment and tools as chain hoists, drills, vises and grinders, ball washers, flags, cup setter, hole cutter, cup extractor, trap rakes, cups, putting green markers, soap and towels.

Five fairway gang mowers, valued at \$2000, two green mowers, an aerifier, a verticutter, a sprayer, benches, signs and drinking water fountains will be ordered by June 1.

"Only the finest equipment will be purchased to insure that Property Owners and their friends will have one of the finest conditioned courses on which to play," said Giuntini.

6000 Pieces of Mail Processed at New Post Office

There's no dust gathering at the new Christmas Valley Post Office. Although the Christmas Valley Rural Station opened Jan. 2, there were 6,000 pieces of mail processed in its first month of operation, according to Barbara Baert, the Postmistress.

The Post Office, located in Al and Connie Baert's Grocery Store on Christmas Valley Road, is classified as a fourth class post office. The official address is Christmas Valley Rural Station, Silver Lake, Oregon.

Mrs. Baert assures everyone there won't be any slackening of mail volume, thanks to Chamber of Commerce president Mel Brown's idea to mail Christmas cards from here with a Christmas Valley cancellation stamp.

This story appears on page 8.

Work Speeds Up on Extension to Townsite Lots

One of the most important phases of the overall \$350,000 water system for Christmas Valley — extension of pipelines to Unit 5 of the townsite—is well ahead of schedule.

"Thanks to the mild winter weather we've been enjoying, progress on this vital extension has far exceeded our expectations," said president Carlo P. Giuntini.

"Assuming we continue at this accelerated rate, and I foresee no reason why we shouldn't, I feel we will complete this particular piece of work within 60 days.

Serves Townsite

"This work is especially important because these water mains will service the entire townsite. We will make sure that water is piped to every lot in the townsite," promised Giuntini.

"We project that the entire water system, which will cost our company about \$350,000, will be completed within a period of 18 months. This pace is also ahead of our original schedule," he said.

7 Miles of Pipe

Bob Byam, superintendent of water line installation, Delmar Hand, chief welder, and Chuck Popish have been spearheading the important work. Supplies are coming right on time. The other day two huge truckloads of water main pipe were delivered here.

Nearly seven miles of pipe already has been installed and another mile of 2-inch temporary pipe.

"We are still developing new wells. As a matter of fact, our immediate plans call for drilling of at least four more wells. With all this pipe laying we're also installing the best pressure tank systems to insure an adequate supply of water for the anticipated population increase here," said Giuntini.

One of the wells will have either a gas or diesel pump to insure operation regardless of any emergency.

MARINE SUGGESTS CLUB GROUPS

Dear Mr. Carlo P. Giuntini:

I have just recently purchased two parcels of property in Christmas Valley, Oregon. I am very enthusiastic about my investment there and have great hopes for the development of the whole project.

However, I realize that enthusiasm alone is not enough. Your company has already done much to promote the growth of the area, but I feel that in order to fully succeed you will need the ACTIVE support of the Property Owners.

Their support may prove invaluable both in good ideas (I have a few myself) as well as in active support such as advertisements and word of mouth publicity.

To fulfill our share, I feel that we, the Property Owners, should be organized into a "Christmas Valley Owners Association" with sub-units in San Francisco, Los Angeles, San Diego and wherever else a substantial number of Owners may reside.

The aim of this organization would be to aid your company in development and growth of Christmas Valley.

Please let me know what you think of my idea. If you favor it, please assign one of your representatives to work with me on the project.

Sincerely yours,
(signed) TED LOPUSZYNSKI,
1st Lt. U.S. Marine Corps
4382 38th Street,
San Diego, Calif.

PRESIDENT ENDORSES IDEA

President Carlo Giuntini was pleased to learn of Lt. Lopuszynski's idea and enthusiasm as he indicated in the following letter. The Marine, however, wasn't the only one who had this fine idea.

Two Property Owners in Saugus, Calif., Mr. and Mrs. Russ Lansdowne already have formed such a club with the Ralph Kains and George Shuitzes.

They meet for Koffee Klatches and lively discussions about their land and plans for their future homes.

We heartily endorse this movement and hope other such clubs will be formed.

The following is Mr. Giuntini's reply to Lt. Lopuszynski:

Dear Lt. Lopuszynski:

It was a real pleasure to receive your letter. I am happy to hear of your enthusiasm for Christmas Valley. I would like to reprint your letter in the Christmas Valley Gazette.

This should serve to further the idea you have. I'm sure it will recruit volunteers to carry such a splendid plan forward.

Our representative in San Diego is Ken Ketchum. I will send my letter to him together with a copy of yours with instructions for him to be in touch with you. I am sure that some material good will come of it.

Again, many thanks for your suggestions and please keep in touch with me in the furtherance of your suggestions.

FARM PRODUCTION, INCOME CAN BE INCREASED 200%, FARMERS TOLD

Christmas Valley salesman Atchison brought good news to ranchers and farmers after attending a meeting of the Midstate Soil Conservation District in Bend on Feb. 6.

Reports at the meeting showed that production and income can be increased from 10% to a whopping 200% or even higher if owners operated their farms accord-

ing to sound conservation practices.

The District's motto is "A Conservationist on every farm and ranch in the District."

The SCD has been invaluable in its assistance and cooperation at the Christmas Valley Model Farm. Its representatives also have played leading roles in the Christmas Valley Farmers Day Land Demonstration Days.

PROPERTY OWNERS FORM CLUB IN SAUGUS, CALIF. — Many Property Owners can hardly wait until they can start building their own homes in beautiful Christmas Valley. To get things moving along these lines, six residents of Saugus gathered at the home of Mr. and Mrs. Russ Lansdowne for a Koffee Klatch and a discussion about their land and plans for their future homes. Mr. and Mrs. Ralph Kain and Mr. and Mrs. George Shuitz are other members of the newly formed organization.

CHRISTMAS VALLEY CLUB FORMED IN SAUGUS BY PROPERTY OWNERS

The smiling faces above portray the happiness of Proud Owners of Christmas Valley land.

The get-together and coffee klatch was held at the home of Mr. and Mrs. Russ Lansdowne in Saugus, California.

Those who attended were Mr. and Mrs. Ralph Kain, and Mr. and Mrs. George Shuitz, new arrivals to the Christmas Valley Club.

The girls had a good time planning their future home, and, of course, the subject of conversation was naturally Christmas Valley.

"And you know when you come to think of it, this was all made possible by one man who had vision, foresight and the "know how" to make this dream come true. You all know by now who

he is — Mr. M. Penn Phillips and his organization," said Lansdowne.

CATER PLANS MORE ACTIVITY FOR RESIDENTS

Popular Ed Cater, livewire organizer at the Christmas Valley Lodge, is keeping things hopping among the residents here.

Cater continues to conduct the well-attended monthly Family Night Dinners at the Lodge and has also branched outdoors. He is holding ice skating parties and races on the ice of the big Christmas Valley Lake, right alongside the Lodge.

VISITORS HERE HONEST PEOPLE

Visitors to Christmas Valley are exceptionally honest people.

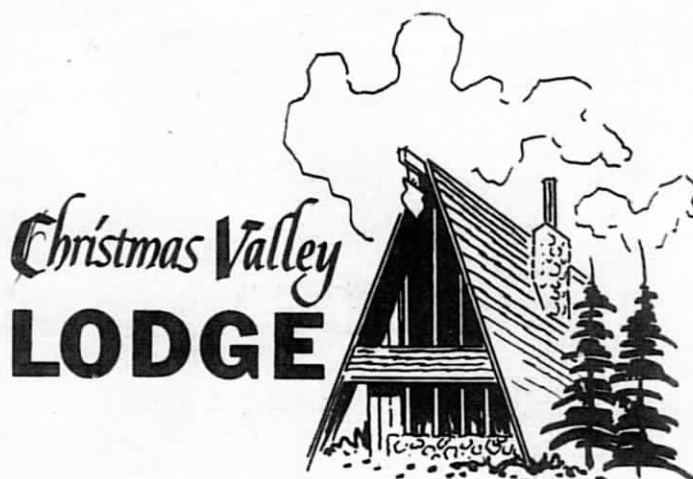

Source of this observation are Mr. and Mrs. Fred Thompson, owners of the comfortable Christmas Valley Motel.

The Thompsons have managed the Motel for more than a year and have not missed a single item.

In a letter to M. Penn Phillips, the Thompsons wrote:

"We have an unusual and excellent record of not losing even one article since we took over here."

"This is a very choice class of people coming to establish homes and build a community here at Christmas Valley. You, Mr. Phillips, and all of us for that matter, can feel proud of them."

Camping Trails Magazine Features Central Oregon

Central Oregon was the featurette of the widely distributed February issue of the Camping Trails publication.

The article said: "Situated between a high mountain range and an untrammelled desert, boasting more than 1000 miles of streams and more than 300 lakes, central Oregon is justly proud of its designation as one of the most photogenic sections of North America."

Within Easy Reach

The article went on to say that "Sage brush, cinder cones and Indian pictographs dot the landscape in the east section of Central Oregon. Ice caves — which produce ice even in the hottest part of the summer — and a reservoir for water skiing are within easy reach.

"Central Oregon claims it has something to offer to everyone. Fishing, swimming, horseback riding, cave exploring, photography and just plain loafing are offered by this region.

Lots of Elbow Room

"But probably the most outstanding single feature of central Oregon is its magnificent outdoor country, never more than a few minutes away by car.

"And because it has lots of elbow room, central Oregon is being discovered as one of those places to see a lot while getting away from it all."

Value of Oregon Crops Up 8%

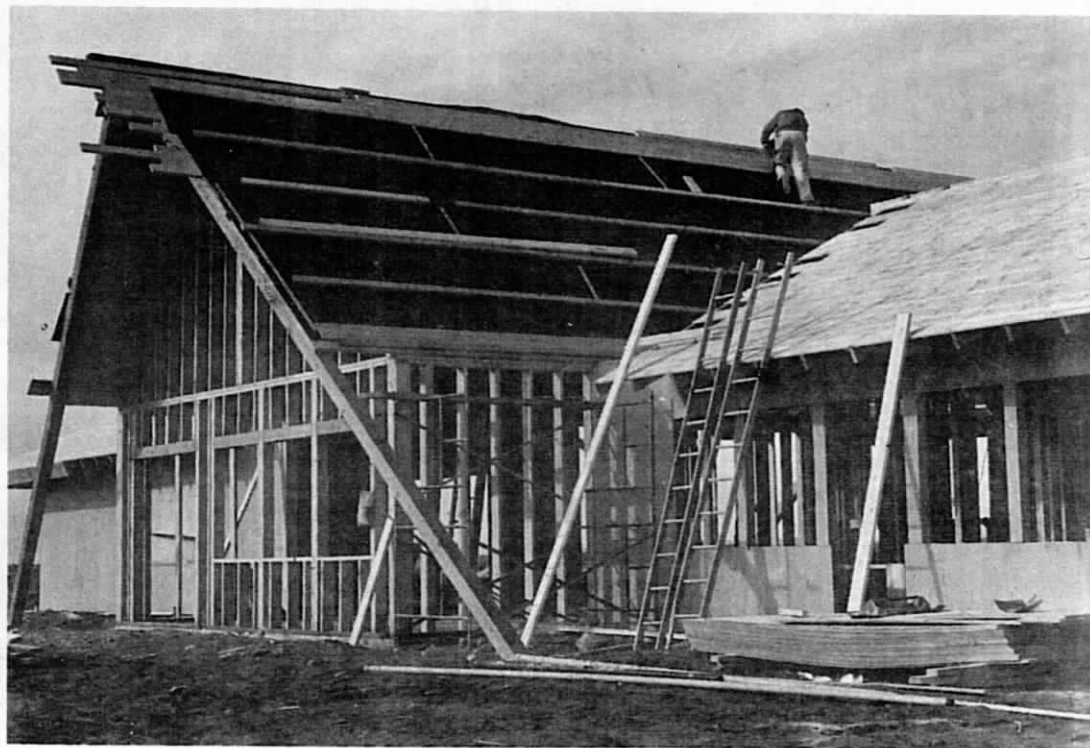

The value of Oregon crops in 1962 has been placed at nearly \$253,000,000, about 8% higher than in 1961.

Agricultural economists at Oregon State University reported total crop tonnage was estimated at 5,400,000, up about 7%. Higher average prices and higher yields both figured in the increases.

In terms of value, wheat led the list.

Other leading crops were hay, barley, potatoes, snap beans for processing, pears, strawberries, ryegrass seed, cherries and oats.

These 10 crops accounted for nearly three-fourths of Oregon's 1962 crop value, according to Mrs. Elvera Horrel, OSU Extension Economist.

RECREATION HALL FOR TRAILER PARK NEARS COMPLETION — Workmen are rushing to complete this big building, which will serve as the Recreation Building for residents of the Christmas Valley Mobile Home Estates and Own-Your-Own Trailer Park development. This building will have club meeting rooms, game rooms, a beautiful lounge and even laundry facilities.

Workmen Rush to Complete New Trailer Park Recreation Hall

The elaborate Recreation Hall, which will be the social center of Christmas Valley Mobile Home Estates, is rapidly nearing completion.

This is one of the features of the Mobile Home Estates, along with dock facilities and boat launching ramps right on the shore of Christmas Valley Lake.

The trailer park's initial construction will consist of 32 completely developed rental spaces. Enough land area has been set aside to form at least 48 more.

Each space will have an individual concrete patio, plus water, electric and sewage hook-ups. Each space will be large enough to accommodate even the largest trailers built today.

These individual spaces also have off-street parking facilities for the family car.

The Recreation Hall is certain to make a hit with residents here. The building will have club meeting rooms, game rooms, a

beautiful lounge and even laundry facilities.

Architecture will be heavy post and beam construction, which is similar to that of the Christmas Valley Lodge.

Occupants of the trailer park will have access to private docking and beach facilities on the

lake, as well as barbecue pits and outdoor game facilities.

The Mobile Homes Estate project is located East of the Own-Your-Own Trailer Park development and West of the Lodge, between Christmas Valley Road and the Lake.

Easy Way to Make Fish Scale Remover

A very practical device for removing fish scales can be made by nailing a bottle cap to a short piece of wood and dragging the ragged edges of the cap, cross-grain across the finster.

Scaling should be done as soon as possible after the fish are caught.

All Year Fishing at 2 Reservoirs in Lake County

More good news for fishermen among Christmas Valley Property Owners.

The Oregon Game Commission announced all-year fishing in two reservoirs located in Lake County.

Under the new rules, Ana Reservoir and Priday Reservoir will be open for fishing all year 'round. Summer bag limits will be observed.

Some of the finest trout fishing is done here, according to veteran anglers.

Good Fishing

Ana Reservoir is located between Summer Lake and Christmas Valley, at the south end of Picture Rock Pass.

Priday Reservoir is located 40 miles east of Lakeview, between the towns of Adel and Plush.

The general trout season in Oregon starts April 20 and extends through October 31. But anglers enjoying their sport in the Ana and Priday Reservoirs needn't worry about these dates anymore.

20,000 Pheasants Due

The Oregon Game Commission approved suggested production of 15,000 pheasants at the Corvallis game farm in 1963, plus another 5,000 pheasants and 10,000 chukars at the Hermiston game farm.

Antelope Still Roam Here in Big Numbers

By LEROY HARROD,
Fishing & Hunting Editor

It is probably a good bet that the reader of this article and thousands of travelers throughout the West have never seen the Pronghorn Antelope. Many times the Pronghorn will be mistaken for a deer, or even an elk, but to the experienced eye the tell-tale identification of the Antelope is the two white powder-puff clumps of hair on his rump.

LEROY HARROD

Nearly 25,000 Pheasants Released Here Last Year

Nearly 25,000 pheasants were liberated from Oregon game farms in 1962. In addition, 10,685 chukars were released, thus giving hunters plenty of targets.

The Oregon Game Commission reported 17,240 pheasants from the Corvallis game farm and 7,112 pheasants and 10,685 chukars from the Hemiston farm.

In addition, 585 grey partridge were released in Western Oregon. A small transplant of bamboo partridge was made in Coos County to determine the adaptability of the species.

Rogue River Salmon in Good Showing

The 1962 count of 32,651 spring chinook over the counting boards at Gold Ray on the Rogue River was one of the best runs since the installation of the counting station in 1942. The run that year was the highest on record, 43,400 chinook.

The 1962 run represents 207% of its parent run in 1958, 15,716 salmon. The 1961 run was just over 33,000 salmon and has been exceeded in only three other years since 1942.

Summer steelhead run also was good, with 2700 fish counted. This is 42% above the 10-year average.

There are not too many of these beautiful animals left in their wild state for any of us to see. Once upon a time the Antelopes were as numerous as the Bison. They ranged from Alberta, up in Canada, to Mexico in herds of thousands where they shared the Great Plains with the Buffaloes.

The Monumental Slaughter

The decline of the Pronghorn Antelope came when the Transcontinental Railroads penetrated the Western Plains Country. Man came and settled the rich grass lands. He brought in cattle, sheep, horses, mules, goats and other "grass eating" animals to feed upon the natural and native grasses which had been the livelihood of the Buffalo and the Antelope.

Then came the vicious slaughter — The Market Hunter. The Antelope was killed by the thousands. Much of the meat was shipped to the eastern cities where it was sold to the restaurants and cafes. I have seen old Bills-of-Fare, as menus were called in those days, which offered Antelope steaks, with all of the trimmin's, for 35 cents per order. I sure wish I had been around in those days.

Natural Feed Taken

When man and the Transcontinental Railroads had cut through the vast pastures of the Antelope, they could no longer make their seasonal migrations which permitted them to feed with the changing seasons. Most of their natural feed had been taken by man and his domesticated animals. Starvation faced the Antelope.

Thousands died for want of food. The market hunter then finished off the job, leaving only a few scattered herds which were finally saved by Protective Legislation and federal and state Wild Life Management.

The Pronghorn Antelope population is now reported at around 200,000 head, a mere fraction of former numbers. Many of these remaining have permanent protection and shelter in Refuges. Some small herds are in several of the National Parks where they are fed when feed is in short supply on their natural range.

Refuge Adjoins Christmas Valley One of the largest Antelope refuges is in the area east of Christmas Valley. It is known as the Hart Mountain Antelope Refuge and within its confines there are hundreds of thousands of

ANTELOPE GETS ITS PICTURE TAKEN—This prized animal seems pretty confident of itself considering that last year 814 hunters reported killing 418 antelopes, for a hunter success percentage of 51. In the Silver Lake area, in which Christmas Valley is located, 140 hunters bagged 59 antelope.

acres of natural habitat where the Antelope may roam, feed and multiply in peace and quiet.

There are no fences to define the boundaries of this refuge, and it is well posted and guarded. Not being confined within the boundaries of the vast refuge the "Powder-Puff" occasionally wanders beyond his home into and through privately owned ranches and lands.

It is not uncommon to see a few and sometimes a herd of 100 head of these beautiful animals grazing in the pastures of the big ranches in Christmas Valley and nearby Ft. Rock Valley where they occasionally come in late fall and winter to graze on the wheat and barley stubble left from the harvest of the last crop.

Watch for Powder-Puffs

Occasionally a few scattered animals will be sighted when driving on the main highways throughout Southeastern Oregon and on the roads which wander through the Hart Mountain Antelope Refuge.

On several occasions while driving through Christmas Valley I have had the pleasure of watching herds of up to 150 Powder-Puffs grazing in nearby fields. On one occasion, Jack Hauskins and "Tony" DiGiomanni, friends of mine from San Clemente, were driving on a paved highway through Ft. Rock Valley. Near the famous old Ft. Rock I spotted a number of animals grazing and remarked to Jack, an old Wyoming rancher and cowboy, that they were a nice looking herd of cattle.

"Cattle, my foot, those are Antelope. Just stop the car and I'll prove it to you." He got out of the car and "let out" a war whoop that could be heard for a mile. Almost immediately the animal nearest us turned his tail toward us and "took-off" with unbelievable speed, followed by every other animal in the herd. Unique Communications System Jack then told me about their unique communications system—

the two white Powder-Puff clumps of hair on their rump which they use to spread the danger signal to other members of the herd.

"Tony" had his camera with a long range telephoto lens and "shot" several pictures but the camera just wasn't fast enough to stop those fast running "Powder-Puffs." A little later that morning we spotted three of these beautiful animals grazing in a field about one-half mile away. We stopped and watched them for quite some time.

Should you happen to be driving north on highway 395 from Alturas, California, through Lakeview, Oregon, and on to Burns, Oregon, keep your eye "peeled" for Powder-Puffs.

Disappear Fast

Phil Washington, the genial and ever-busy General Project Manager of Christmas Valley, together with Mel Brown of Christmas Valley, only recently drove almost on top of twenty-three Powder-Puffs while going from Christmas Valley into Silver Lake. Phil told me that he had never seen any animal disappear so fast and with such grace and ease.

This is an experience which I have never before told as I have always been ashamed of the part which I played in the "slaughter" of six of these beautiful animals.

The incident happened over 30 years ago in an area which is now a part of the Hart Mountain Antelope Refuge. I was driving to a place called Jordan Valley. A deputy of the California Real Estate Department and his wife and Mr. and Mrs. Moody were with me. The road was no more than a cattle trail and darkness overtook us near the headquarters of the vast Miller and Lux White Horse Ranch.

Car Trouble

The Cattle Boss in true Western tradition invited us in for "grub" and a bed for the night, both of which were most welcome. Early the next morning we headed east. We had traveled about 40 miles when my right rear wheel bearing

burned out. We were about a mile from a Shepherd's ranch. I walked into the ranch and explained my difficulties.

The only automobile was in for supplies and would not return for at least two days. He hitched a team of horses to a "buck-board" and drove to our stranded car and towed us into his ranch house.

Not Exactly Modern

It was anything but a modern type of a house but we were quite happy to accept his hospitality. He had quite a large range upon which he ran about 3,000 head of sheep with the help of several Basque herders. He did his own cooking while his daughter was away and after our second meal I made him a proposition to "take over" the cooking job.

With the assistance of Mrs. Moody, several meals were put on the table but it wasn't long until we could hardly look a piece of Lamb, Sheep or Ram "in the face" regardless of how it was cooked.

Our second day at the ranch I noticed what appeared to be cattle feeding around stacks of hay about one-half mile from the house. I asked the owner if they were his cattle and he said, "They are Antelope, and were just about eating him out of all his winter sheep feed."

First Look

I had never seen wild Antelope and was quite curious about them. The shepherd patiently told me what he knew and said, "As for me, they are a pain in the neck and I'd like to rid the country of all of 'em but it's hard to get close to them."

"Besides," he said, "I don't have either sufficient ammunition or manpower to make much headway against those Powder-Puffs." (Continued on Page 5)

ANTELOPE STILL PLENTIFUL HERE

(Continued from Page 4)

Puffs." That's where I first heard the name or expression.

I told the Shepherd we had two 30-30 rifles and plenty of ammunition which we were just "itching" to try out on some "smart" animals whose meat would be considered a treat.

The old Shepherd outlined a plan whereby the three of us would "plant" ourselves in the stacks of hay before daylight the following morning and when the Powder-Puffs came we'd "let 'em have it."

No Law Out Here

I asked him about the game laws. He said, "There ain't no laws out here except what we ranchers make. When wild animals steal your winter's stock feed, shoot 'em down if you get within range."

The next morning at 3 a.m. after some hot coffee, the three of us took off for the hay stacks. Arriving there we concealed ourselves about 100 feet apart. It was agreed that our host would give the signal. He also had an old model 30-30 for which we furnished ammunition. It was a crisp, frosty morning but we were covered with hay so did not suffer from the cold.

Buck Fever Attack

As I now remember it was just a few minutes after daylight when I spotted animals approaching. I immediately had an attack of "Buck Fever" and was trembling all over when the old Shepherd let out the signal to start firing.

For a moment it sounded like the "Battle of the Bulge." I'll never know just how many shots were fired but in front of us as we came out of hiding were six Powder-Puffs — three bucks and three does — all as fat as butter.

The old Shepherd said, "You fellows start skinning out those 'thieves' and I'll go to the ranch and fetch the team and wagon."

Moody and I didn't know much about skinning and cleaning an Antelope so we dragged them all together in one spot and sat down to wait. The Shepherd arrived about 9:30 a.m. and we loaded all six animals into the wagon.

Antelope Chops

At the ranch house, we set to work dressing out our "kill" under the guidance of our host, but not before we sat down to a breakfast of fresh Antelope liver, ranch style gravy, sour dough hot cakes and cups of strong black coffee. That evening for dinner we had broiled tenderloin chops with cottage fried potatoes "mit" onions, no less, and great big soda biscuits about the size of a good sized saucer.

I went to bed early that night all worn out. Actually I did not go to sleep until the wee small hours of the morning as I could not forget the cowardly and shameful manner we had used to shoot down those defenseless Powder-Puffs. The more I thought of the slaughter the more ashamed I felt and as the hours dragged along I became more and more anxious to get away from the whole scene of the affair.

Vowed Never Again

About 5 a.m. I heard a car drive into the ranch house. It was the Shepherd's daughter with the supplies. After a good breakfast of steaks and the "fixin's" we made a deal with the old Shepherd to tow us into Jordan Valley where we could get a new bearing. We loaded three of the Antelope into his car for friends of his. The trip was uneventful

WALKING ANTELOPE — Pronghorn antelope doesn't seem to be afraid of any hunter. They're found throughout the sagebrush areas of Southeastern Oregon. Some of the more popular hunting areas are Silver Lake, Drakes Flat and Guano Creek in Lake County, all three areas are adjacent to Christmas Valley.

except for those thoughts I kept having about the cowardly slaughter of those six Antelope.

I made a vow right then and there that I would never again harm one of those beautiful animals. That was more than 40 years ago and I am happy to say that I have never broken the vow. Since that time I have seen perhaps hundreds of Powder-Puffs. Now that I have confessed I feel like a load has been lifted from my shoulder.

The road which we traveled from Winnemucca, Nevada, to Jordan Valley, Oregon, has since become a highway. I have traveled it many times and I always tell whoever is with me that we are passing through Powder-Puff Valley and that many wild Antelope had made this part of the valley their home. But I have never told anyone — until now — of the slaughter which took place at the hay stacks. The Shepherd, Bless his old Soul, is gone now, having passed on in 1945.

Daughter Objected

His lovely daughter, who graduated from USC in 1940, married a rancher from the nearby Snake River Valley. I always call and say "Howdy" when I'm in that part of the country. She never fails to ask me if I've slaughtered any Powder Puffs recently. She never thought much of our going out and using such methods to slaughter her pet Powder-Puffs. But she was a good sport and to my knowledge never "squealed" on us.

Unique Facts About Antelope

A unique feature of the Pronghorn Antelope is their horns which are branched. Unlike the antlers of the deer family, which are shed complete each year, or the hollow permanent horns of cows and goats, the Pronghorn has a permanent bony core about which is grown each year a new protective covering.

Their hair is coarse and their skin spongy, not being tough enough to make good buckskin. The meat is tender and of a delicate game flavor and is much sought after in the few areas where hunting is permitted. They are nervous and shy but exceedingly curious, and sometimes can be lured into rifle or camera shot distance by the waving of a red or white rag.

Put On Show

They love to race with one another. If you ever want to see the Pronghorn at his best, stop at a little restaurant just outside the north entrance of Yellowstone Park between Mammoth and Gardiner. Sit down to a good breakfast and watch a herd of about 50 beautiful Powder-Puffs across the road and behind the National Park fence, run and play for about two hours early every morning — weather permitting.

They will not come up to the fence and eat out of your hand like some deer and elk occasionally do but they will "put on a show" for you which is well worth taking some time out for.

Their fawns, usually twins, are born in the spring and are fiercely defended by their mother. Old mother Antelope hides each little fawn in a separate nest very shortly after his birth. By being separated in this manner the little fellows stand a better chance of survival should one of their natural enemies like the bob-cat, mountain lion or even a hungry coyote find them before they develop their "running legs."

Oregon Antelope Hunting Season

Usually the season is about five days each year with a bag limit of one buck having horns longer than its ears. Six areas are usually thrown open to permit holders only. Usually about 900 permits are available by drawing.

This drawing is open to Oregon residents only. So if you crave a nice, sweet "mess" of Antelope chops or steak find yourself a friend who lives in Oregon and who has been lucky enough to be awarded a permit and who is a good enough shot and smart enough to bring down one of those beautiful and delicious Powder-Puffs.

In 1961 900 permits were available and awarded under supervision of the Oregon State Game Commission. On a basis of Report Cards, 814 reporting hunters harvested 418 Antelope for a success of 51%. The quota and season dates have not yet been set for 1963 but will probably be about the same as in 1961 and 1962.

Best Hunting Spot

If you are Antelope hungry or want to add a nice head to your trophy collection go into eastern Wyoming where there are more Pronghorns running wild in the open country than in any other area. It is best to hire a guide. He knows where the animals are and has the know how to get one for you.

Warning: Don't crawl into a hay stack and "pot shoot" any of these Powder-Puffs. The law will "throw the book at you" these days. Besides, you wouldn't want to be classed as an Antelope Slaughterer like some folks I am acquainted with.

Soon Be Fishin' Time

By the time the next issue of the Christmas Valley Gazette goes to press it will be about time to start getting your fishin' gear together so look out for a hot fishin' story, telling about a new hot spot within just a short drive of Christmas Valley.

Planting of 1000 Trees to Beautify Lodge Area

Christmas Valley soon will have that Christmasy look for sure.

Project manager Warren Morton said 1000 trees of different varieties will be planted south and east of the main parking areas and the entrance to the imposing \$100,000 Christmas Valley Lodge.

Morton said he has procured 400 douglas firs, 150 Norway spruce, 150 Lodge Pole pines, 150 green ash, 150 Black Locust and 150 Russian Olive trees from the United States Forestry Service for the planting.

Morton said the trees, which are from four to six inches tall, cost \$11.10.

Real Christmas Trees

The fir, spruce and pine trees are varieties which are in demand as Christmas trees and can be harvested as such when they reach the desired height.

The green ash, locust and Russian olives will be used for additional landscaping around the Christmas Valley Golf Course and other locations in the Christmas Valley townsite.

20 Miles of Power Lines Installed

In the past few months the Midstate Electric Co-Op, operating under the Rural Electric Administration, has installed approximately 20 miles of power lines in Christmas Valley.

These extensions have been run to the various residences in Christmas Valley, both in the townsite and at the more distant acreage plots.

Telephone facilities are supplied by Pacific Bell Telephone Co.

Growing of Xmas Trees Could Be Commercial Crop

Current and future Christmas Valley residents who might want a hobby or even a business are advised to plant Christmas trees.

General Project Manager Phil Washington said his discussions with leading experts on the subject indicated there is great potential here for developing this growth of Christmas trees into a commercial venture.

"Actually," said Washington, "planting and nurturing of these Christmas trees is a relatively easy job. I'm sure that many of our Property Owners could do it without a great deal of sacrifice."

Washington said trees could be purchased from the United States Forestry service at a relatively nominal price.

Sure-Fire Slogan

"The small trees, from 4 to 6 inches in height, are planted in a sawdust mulch and are watered by overhead sprinklers. In a few years they become good-sized Christmas trees ready for the market."

"Douglas fir, Norway spruce and Lodge Pole pine trees are types greatly in demand as Christmas trees when they have reached the desired height to be marketable," said Washington.

Gazette Readers to Learn Best Farming, Ranching Operations

What are some of the best commercial crops to be grown in Christmas Valley? Which crops grow fastest? Which crops require the least attention? The most?

Answers to these agricultural questions and many others will be forthcoming in subsequent publications of the Christmas Valley Gazette.

General Project Manager Phil Washington has consulted top farming and ranching experts and has compiled much important information.

"Publication of this important information is just a continuation of our program to help residents here plan a profitable farming program," said Washington.

"Establishment of our 40-acre Model Farm, the conducting of the successful Farmers Land Demonstration Days and research in sage brush spraying from airplanes are all examples of our unceasing efforts to bring Property Owners all the intelligence we can uncover.

"We are working very closely with experts from the Oregon State College Agricultural Service and the Fort Rock-Silver Lake Soil Conservation District to find

the answers to our problems.

"This knowledge will be channeled toward bettering farming and ranching operations not only here in Christmas Valley but throughout the great state of Oregon," said Washington.

Washington stressed a variety of crops can be grown here.

"We had a soil analysis done by an outstanding research organization, the Twining Laboratories, Inc. The report was extremely encouraging.

"Analysis showed the soil in the general area of Christmas

Valley is good soil, free from alkalai salts. It is well supplied with humus, organic nitrogen and major plant foods as nitrates, phosphates and potash," said Washington.

Joe Ward Anxious to Renew Work on Sporty Golf Course

Joe Ward, who recently visited Christmas Valley, is a man between jobs, though he has two.

Ward is the Christmas Valley golf course superintendent and in winter is the skiing teacher at Mt. Bachellor. Things have been slow at Mt. Bachellor because of a lack of snow.

"It's just one of those in-between periods," lamented Joe. "I'd like to get started working on our golf course, but it's still not quite warm enough. And I can't go to work teaching skiers because it's not quite snowy enough."

Incidentally, project manager Warren Norton and his charming wife, Mitzie, are now ski enthusiasts, weather permitting.

AL GOMES TO START NURSERY

Al Gomes of Cypress, Calif., has notified General Project Manager Phil Washington he was interested in opening a G&G nursery in Christmas Valley.

Gomes, who owns property on Christmas Valley Road, said he would stock all types of plants and fertilizer and would do landscaping and new lawns.

Gomes now has a similar business, Al's Gardening Service, in Cypress.

DRILLING FOR NEW WELL — Another well for mushrooming Christmas Valley. This one is located in Unit 5, which is located west of the center of the Christmas Valley townsite. Driller Gordon Goeres expects this well to provide more than enough water for all residents there.

20,000 Hunters in Survey to Check 1962 Game Kill

Twenty thousand hunters will begin shortly to assist the Oregon Game Commission in its annual survey to determine how many big game animals, game birds, and waterfowl were taken during the 1962 season.

The 20,000 nimrods selected at random from more than 250,000 licensed hunters will be asked to give their individual reports on success or failure last year.

The game commission recently sent hunter questionnaires to this select group. Recipients were requested to answer all questions and to report accurately their success as well as failures during last year's hunts.

The questionnaires must then

be returned to the game commission for statistical analysis. Recipients who fail to return the questionnaire within the time limit allotted will be contacted in person by game commission personnel.

Compute Game Kill

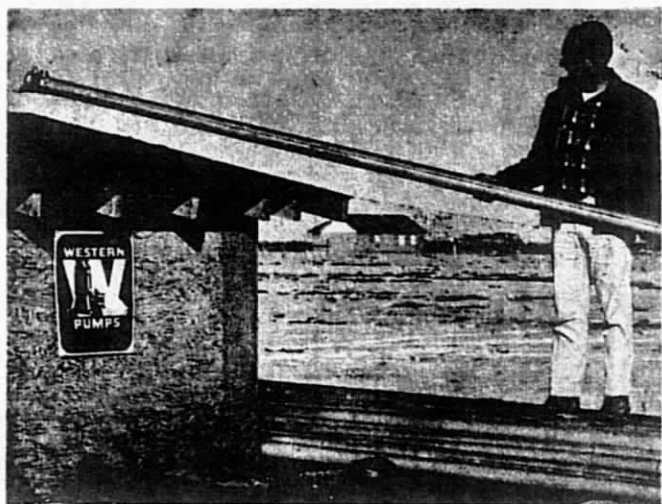

Information from the questionnaire is used to compute the total game kill by hunters during the year. This includes the deer kill, elk kill, and take of upland game birds by all species and for all species of waterfowl.

Statisticians report that information obtained from this random sampling of hunters—around 8 percent of the total—is ex-

KIDS HAVE FUN ON ICE — Though there are plenty of weak ankles in the crowd, as shown in the above photograph, youngsters of all ages are having the time of their winter life gliding across the frozen Christmas Valley Lake. Skating parties and various races and games are regularly planned for residents. The plush and cozy Lodge is very close to the Lake for the timid souls.

Fishermen Pleased at Only Few Changes in 1963 Angling Laws

THE NEW angling regulations adopted by the Game Commission at its January meeting become effective on February 9. They do not differ very much from the 1962 regulations. Opening of additional lakes and impoundments to year around fishing, elimination of the November salmon closure for the Columbia River and tributaries, and a special bag limit for jack salmon in certain waters are the major changes.

The general trout season dates are essentially the same as before: April 20 to October 31 in all zones except streams in Zones 1, 3, and 4. The streams in Zone 1, the coastal area, and the Cascade lakes, reservoirs, and their tributaries have a general open season from May 25 through October 31. Exceptions to these dates are listed by zone in the official angling synopsis.

Repeal of the closure of the Columbia River and its tributary streams to November salmon fishing resulted when it was agreed by the Game Commission and Washington Department of Fisheries that the runs of silver salmon in the lower tributaries were sufficient to allow sport fishing during that period.

New waters open to year around trout fishing include Garrison, Saunders, Loon, and Selmac Lakes; Emigrant, Ana, and Priday Reservoirs; and all lakes, impoundments, and dredge ponds in Zones 7 and 8 except Malheur, Krumbo, and Baca Reservoirs.

A summary of this year's changes follows. Copies of the official synopsis containing the complete regulations will be available at license agencies as soon as possible.

GENERAL TROUT SEASONS

April 20 to October 31 in all zones except streams in Zones 1, 3, and 4. May 25 to October 31 for streams in Zone 1, and for lakes, reservoirs and their tributaries within the forest boundaries in the Cascade Mountains (including Paulina and Siskiyou Mountains).

BAIT REGULATIONS

Living, dead, or preserved fish or parts thereof, exclusive of salmon eggs, may not be taken, used, or held for use as bait in angling in any waters;

Provided that cottids and nongame marine species may be used in Zone 1 and tidewater areas;

Provided further that dead fish or parts thereof may be used for bait in Gerber Reservoir, Klamath and Owyhee Lakes; in the main stem or flood plain lakes and sloughs of the Willamette and Columbia Rivers; in the Snake River main stem, and all slack water of Snake River impoundments; and in Zone 1.

ZONE 1

Coos River (South): Closed to salmon angling entire year above old hatchery bridge site ½ mile above Dellwood.

Fall Creek (Alsea): Closed to all angling from Carns Creek up to 200 feet above Fish Commission hatchery water-supply intake dam—a distance of about ¼ mile.

Garrison Lake: Open to trout angling entire year (summer bag limit).

Klaskanine River (North Fork), Clatsop County: Closed to all angling from ¼ mile below the hatchery dam down to tidewater May 25 to June 15.

Klaskanine River (North Fork): Closed to salmon angling except for the period October 1 to February 28.

Saunders Lake: Open to trout angling entire year (summer bag limit).

Siletz River: Closed to all angling for a distance of 900 feet (marked boulder) below the falls to 200 feet above the falls.

ZONE 2

Blair Lake: Closed to fishing from a motor-propelled craft.

Eagle Creek (Clackamas County): Closed from 200 feet above the fish ladder at Eagle Falls to 300 feet below.

Eagle Creek (Clackamas County) open April 20 to salmon and steelhead.

Hills Creek Reservoir and tributaries: Open to angling April 20 to October 31.

Lost Lake and tributaries (Linn County): Open April 20 to July 31.

McKenzie River, South Fork: Closed to all angling from a marker 200 feet below salmon trap at Cougar Dam upstream to concrete bridge at head of reservoir from June 15 to October 31.

ZONE 3

Loon Lake: Open to angling entire year (summer bag limit).

Diamond Lake: Open May 25 to October 31, except those portions within a radius of 450 feet of the mouths of Silent and Short Creeks and 1,000 feet of outlet open July 1 to October 31.

Umpqua River: Summer deadline changed from Steamboat to Mott Bridge.

ZONE 4

Emigrant Reservoir: Open to angling entire year (summer bag limit).

Rogue River: From Gold Ray Dam to a point 950 feet below Copco Gold Ray bridge from January 1 to August 31; and to the U. S. Geological Survey gauging station cable crossing approximately 500 feet below said bridge from September 1 to December 31.

Selmac Lake: Open to angling entire year (summer bag limit).

ZONE 5

Crescent Lake: Open April 20 to October 31.

ZONE 6

Ana Reservoir: Open to angling entire year (summer bag limit).

Priday Reservoir: Open to angling entire year (summer bag limit).

ZONE 7

Open to angling the entire year all lakes, impoundments, and dredge ponds.

John Day River (Middle Fork) below Highway 395: Open to steelhead and salmon angling except from March 15 to June 30.

Mill Creek: Open to trout angling April 20 to October 31.

ZONE 8

Open to angling entire year (summer bag limit) all lakes, impoundments, and dredge ponds except Malheur Reservoir, Krumbo Reservoir, and Baca Lake.

Malheur and Krumbo Reservoirs open April 20 to October 31.

ZONE 9

Camp Creek: Open to angling.

ZONE 10

Columbia River: Open to salmon and steelhead fishing entire year.

WINTER REGULATIONS

ZONE 1

Bag Limit: A special jack salmon bag limit of 5 fish per day or 10 in possession or in 7 consecutive days applies to the Alsea River, Fall Creek (tributary to Alsea), Siletz River, Tenmile Lakes, and Tenmile Creek for the period November 1 to November 30. The special jack salmon bag limit is in addition to the regular winter bag limit.

Open to angling.

Alsea River (North Fork): Up to first wooden bridge above Game Commission hatchery.

Big Creek: Up to Pig Pen Creek.

Coos River (South): Open to salmon angling up to hatchery bridge site ½ mile above Dellwood.

Coos River (South): Open up to Cape Creek except for salmon and jack salmon.

Drift Creek (Siletz Bay): Up to first concrete bridge above North Creek.

ZONE 2

Eagle Creek (Clackamas County): Up to the abandoned road bridge approximately ¼ mile above Eagle Fern Park.

Eagle Creek (Multnomah County): Up to and including the Punch Bowl.

Quartzville Creek: Up to Canal Creek.

Sandy River: Up to Brightwood bridge. (Closed to salmon and jack salmon December 1.)

FORTY POUNDS OF TROUBLE ELIMINATED — Salesman Atch Atchison proudly shows the big bobcat he decided in a fight at the Model Farm. Cat, which was four feet long and weighed 40 pounds, is now being made into a nice rug for Atchison.

ATCH SURPRISED, NATCH, BUT BIG BOBCAT FOUND HE'S MET HIS MATCH

Popular Christmas Valley 22 rifle came in handy. salesman Atch Atchison had quite an experience the other day.

Atch was taking care of the Model Farm animals while Peggy Daley was gone for a few days. One morning he noticed that something had been bothering the chickens in the hen house.

The next morning Atch thoughtfully placed his 22 rifle in his car before he and Bud Baert made the trip to the Model Farm to feed the animals.

Atch walked into the hen house, casually glanced over in the corner of it and got the surprise of his life. A huge bobcat had just entered the chicken quarters.

We are told by a forthright witness that Atch fairly flew out of the chicken house but not hurriedly enough so that he did not bolt the door. That's when the

Atch got his gun and aimed at the bobcat through the small hen house entrance. As they do in television thrillers, Atch, natch, killed the bobcat with a single shot.

This was no ordinary cat, either. It was nearly four feet long and weighed 40 pounds.

Baert now calls Atch "The Great White Hunter," mostly because his face was really white when he came flying out of the hen house.

But Atch can take the ribbing. He's having a bobcat fur rug made for his trailer house bedroom.

FAMOUS UCLA COACH NEW PROPERTY OWNER HERE — Comedian Joe E. Brown, a close personal friend of Arthur E. Reichle, congratulates Artie for one of the many honors bestowed upon the UCLA baseball coach. The comedian could also congratulate Artie on purchasing sizable property in Christmas Valley. Reichle, who operates the Mountain Meadow Ranch, a boys' summer camp in Susanville, Calif., is a hunter, fisherman, quarterhorse owner and is skilled in calf roping. Reichle thinks Christmas Valley is definitely one of the finest outdoors area in which to raise a family.

Ideas Requested for Mailing Xmas Cards

Mel Brown, president of the Christmas Valley Chamber of Commerce, was overwhelmed by the tremendous response his group received from its offer to mail Christmas cards for non-resident Christmas Valley Property Owners.

In a letter to Chamber of Commerce members, Brown offered the services of his group for sending Christmas cards stamped with the unique post mark of "Christmas Valley Rural Station," giving an added touch to the spirit of the Yuletide season.

"I know it's a little early to be thinking of Christmas cards," admitted Brown, "but I wanted to get some idea of the mail volume we could expect. Frankly, we were amazed at the way the idea caught the fancy of our members."

Idea from Alaska

"Some people indicated they would want as many as 300 cards mailed from here to their friends and relatives. We got replies from people in California, Nevada, Idaho, Oregon and Wyoming, but the one which really gave us a big thrill was from Daniel W. Hasson, who lives in Delta Junction, Alaska."

Wrote Christmas Valley's most northerly Property Owner: "I live about 60 miles from 'North Pole, Alaska,' which is a very popular Christmas mailing point similar to what you have in mind for Christmas Valley. The North Pole Post Office handles thousands of mailing cancellations every year. Come warmer weather (It's 43 BELOW ZERO on the thermometer outside my kitchen window) and I'll try to gather more information on their operation."

Other Good Comments

Here are some other comments from Property Owners:

Mae Ghidossi, San Francisco — "I expect to mail about 75 cards and think it's a very good idea."

Mr. and Mrs. Paul Kiser, Campbell, Calif. — "We think it's a splendid idea but must add it will mean a lot of work for Helen Byam."

E. M. and Elsie H. Riffle, Chatsworth, Calif. — "They should be out one month before Christmas. It would be nice if all we Property Owners could be in Christmas Valley for the Holidays."

Marie MacMillan, Venice, Calif. — "I have already put my envelope in my stamp collection and was delighted to hear about Christmas Valley's growing pains. I certainly would like to send all my friends a greeting from Christmas Valley. Just this past Christmas my husband and I were discussing the possibilities of a Christmas Wonderland in Christmas Valley. To have it in the brightest spot in the United States, truly living up to its name."

Mr. and Mrs. Joe Machtofff,

Sepulveda, Calif. — "This is a cute idea. It would be nice if we had some cute Christmas stickers for the outside of our envelopes to identify Christmas Valley."

Merritt L. Taylor, Norwalk, Calif. — "Why not show a pine tree with the message, 'Merry Christmas from Christmas Valley.'"

Lenvil H. Brickey, Laramie, Wyoming — "I can get several people here to mail Christmas cards from Christmas Valley if I can have your permission to do so."

Grover and Mildred Shetterly, Yuba City, Calif. — "It's our opinion that this is a wonderful idea. As a suggestion, why not make up a Christmas card that would show off Christmas Valley."

Mr. and Mrs. John Janca, La Puente, Calif. — "If people mailing cards would remit for postage, this would increase postal revenue of Christmas Valley Postal Station. How about this?"

These are only a few of the ideas we have received. How about mailing us yours? The method of packing and mailing Christmas cards will be described in subsequent editions of the Christmas Valley Gazette.

Lake County

(Continued from page 1) fornia.

Explains Philosophy

Mr. Phillips explained his philosophy thusly:

"We believe, in view of our extensive experience, that recreational facilities are perhaps the major factor in bringing new residents to a new community."

"We also feel that the public interests are best served when these facilities are owned and operated by local residents."

He pointed out that Christmas Valley residents will own and operate some of the finest improvements without the excessive fiscal burden of building and developing them.

Plenty of Room to Hunt in Big Oregon

There's plenty of room to hunt in Oregon.

The annual hunter access survey to determine the trend in land posting indicated an improvement in 1962 over 1961.

"IT'S THE LATEST THING IN HUNTING JACKETS!"

NEW SOFTBALL DIAMOND

(Continued from page 1)

Murphy, Larrie Porter, Ken Morehouse and Charles Brinson are doing the layout work according to plans given the Recreation District by recreation director Vince Genna.

Duffy Knorr and the M. Penn Phillips Co. will supply materials, while Zackey Brown, Owen Holmes, Chuck Selby, Bob Byam and Pat McClister are all donating their time to work on this worthy project.

Weather Unusually Warm This Winter

The weather has been unusually warm in Christmas Valley so far this winter.

There has been only one snowfall thus far in 1963. About 8 inches of snow fell during the first few days of February.

But right after this, a warm Chinook wind came along and melted all the snow. So Christmas Valley residents are basking in more sunshine.

20,000 Hunters in Survey to Check 1962 Game Kill

(Continued from Page 6) tremely accurate. For deer, the accuracy of the total kill is determined to be plus or minus slightly less than 1 percent.

Accurate Count

In other words, if a total deer kill of 100,000 animals is computed from information on the questionnaires, the actual kill may be anywhere between 99,000 and 101,000 animals.

The accuracy of the elk kill and that for upland game birds and waterfowl is also close to the 1 percent margin of error figure.
